

Automation Direct has the goal to put customers first by building relationships in the Industrial Automation Market. The company was originally founded as PLC Direct in 1994 and quickly grew from a tiny company to a well-recognized name in the Industrial Automation Market.

Location	Multiple GA Locations
Size	Multiple Projects
Design Services	Structured Cable, AV, & Security
Client	Lindsay Pope

Automation Direct

Client Objective

NTI has been selected as the technology consultant on the design team for three separate projects as the company has grown. Our services included consulting and design services for the IT cabling infrastructure, security systems, and audio visual systems. For each of the projects, we served as part of the design team.

NTI provided a complete design for the IT cabling infrastructure and security systems for each of the projects.

For the tenant fit-out projects, we also provided the audio visual design. The tenant fit-out projects included:

- Design for a 44,777 SF warehouse
- 57,376 SF, including 93 offices on five levels and an auditorium with a seating capacity of 109 people
- 24,000 SF on four levels with 56 offices

NTI Solutions in this Project

Structured Cabling

Standards-compliant copper and fiber infrastructure, equipment rooms, and pathways following TIA/EIA and BICSI.

Security

CCTV cameras, digital recorders, monitors, card access control, and strategic duress alarms.

AV

Television distribution infrastructure and media pathways designed for future facility technology integration.
