

Fulton County Assembly Hall Renovation

Client Objective

NTI was selected to design the AV upgrades for the 300+ seat auditorium and Dais renovation, replacing an SD analog system with full HD/4K capabilities. Key display and control enhancements include a 220" Direct-view LED main display flanked by two 110" displays, a Crestron NVX networked video solution, and dedicated 98" displays for the Clerk Well, which now runs full AV and Granicus agenda/voting controls.

The overhaul integrates a Shure Digital Discussion system at the Dais, pan/tilt/zoom cameras, and direct connections to the Fulton County TV broadcast suite. Features include:

- Broadcast & Media: Press room SDI/audio feeds, H.264 web streaming via YouTube, and closed captioning routing.
- Interconnectivity: Remote participation for two Annex locations via video conferencing, plus source-sharing between the main assembly hall and a new commissioner's chambers equipped with video conferencing and a large-format LED display.
- Accessibility & Lighting: RF and Wi-Fi assistive listening via ListenAnywhere, alongside updated LED architectural lighting and controls.

The Fulton County Board of Commissioners Assembly Hall has the goal to provide citizens a public area to gather, have meetings, perform public ceremonies, and to commune in order to better the county. The Fulton County Board of Commissioners launched a significant renovation to the Assembly Hall Auditorium in May of 2020. The \$3.5M project is the first major renovation since the doors opened over 20 years ago.
