

Hyatt Regency Salt Lake City

Client Objective

NTI provided the low-voltage design consultation for the IT, security, and AV systems throughout the 26-story, 686,000-square-foot Hyatt Regency Salt Lake City. The 770-room hotel features mountain views, multiple dining venues, and over 60,000 square feet of event space, including a 23,000-square-foot ballroom. A key highlight includes AV-equipped huddle spaces outside meeting rooms that allow attendees to stream presentations while stepping away. NTI is proud to have delivered the structured cabling, AV, and security design to bring this grand property to life.

The Hyatt Regency Salt Lake City has the mission to provide authentic hospitality by making a difference in the lives of the people they can touch every day. They take pride in their services and wanted to build a hotel that services Salt Lake City, the largest city in the state of Utah, in hopes of bringing in more convention goers and tourism to the active surrounding area.

Location	Atlanta, GA
Size	880,000 SF
Design Services	Structured Cabling, AV, & Security

NTI Solutions in this Project

Structured Cabling

Standards-compliant copper and fiber optic cabling backbone supporting all property-wide voice and data.

IT

Infrastructure supporting PBX voice, POS, PMS, administrative LAN, time clocks, and internet systems.

Security

Video surveillance, video management software, intrusion detection, motion sensors, and central control panels.

AV

Complete designs for meeting rooms, background music, speakers, amplifiers, and MATV/CATV distribution.
